**HABERBERGER WRAPS UP WORK ON TWO PROJECTS AT AMEREN'S
TAUM SAUK RESERVOIR**

St. Louis, Mo., March 19, 2010 . . . Haberberger, Inc., a full-service mechanical contracting company based in St. Louis, has announced the completion of two separate projects at AmerenUE's Taum Sauk hydroelectric plant near Lesterville, Mo. The company was recruited to be part of a \$245 million rebuild.

Haberberger was contracted by Tarlton Corp. to weld drain lines inside the dam's penstock. The drain lines release ground water pressure to protect the penstock. Haberberger had to travel more than a mile in the penstock to get the pipe properly positioned, and the company fabricated and installed the 1,600 feet of drain pipe.

Haberberger was contracted by PayneCrest Electric to install instrumentation for the dam's upper reservoir and the power plant. Haberberger's team installed more than 240 instruments, including new float controls to monitor the water flow into and out of the dam's storage basin and new pressure transmitters to regulate the reservoir's penstock pressure.

Both projects were supervised by Haberberger Superintendent Clay Buxton and Project Manager Joe Wilhelm.

Haberberger, Inc. is a 62-year-old mechanical contracting company that offers complete HVAC installation, customized maintenance programs, process piping and piping fabrication, and refrigeration and energy management services to a variety of industrial and commercial customers.
